Re: Eric Wasiolek, D.CS

To Whom It May Concern

It is a pleasure to recommend Eric Wasiolek for both professional and academic positions. Dr. Wasiolek graduated from Colorado Technical University with a Doctor of Computer Science degree in June 2018. His work was excellent in my Literature Review class and I served on his dissertation committee.

He has a passion for computer science, education, and algorithms that process genomic data. He will be a welcome addition to industry or to the faculty.

His strong writing and communication skills include the publication of eight computing articles. In his previous work as a systems engineer, he spoke at industry conferences and provided briefings for technical education.

On his dissertation committee, he was willing to try new approaches and graciously accepted the committee's comments. His recommendations for future research in his dissertation should inspire future scholars and lead to discoveries in his research field.

For my credentials, I joined the Computer Science department at CTU in 1996, chaired the Computer Science curriculum committees, and teach Doctoral Studies. Prior to teaching, I was a software engineer and systems programmer in support of Air Force Space Command and a consultant for Northrop Grumman on virtual reality and simulation game design.
